BookStack v22.07-dev

Features & Security

Public Access

Enabling this option will allow visitors, that are not logged-in, to access content in your BookStack instance.

Access for public visitors can be controlled through the "Guest" user.

☐ Allow public access

Higher Security Image Uploads

For performance reasons, all images are public. This option adds a random, hard-to-guess string in front of image uris. Ensure directory indexes are not enabled to prevent easy access.

☐ Enable higher security image uploads

Disable Comments

Disables comments across all pages in the application. Existing comments are not shown.

☐ Disable comments
